Globale Beschreibung: **Ein Finanzinstrument zur Verfolgung von Werten, die für einen bestimmten Zweck angefallen sind. Im Gesundheitswesen wird es verwendet, um Gebühren für einen Patienten, Kostenstellen usw. zu verfolgen.**

Version: 0.0.1

Liste der Eigenschaften

[*] Wenn es für ein Attribut keinen Typ gibt, kann es mehrere Typen oder verschiedene Formate/Muster haben.

- `_description[object]`: Erweiterungen für die Beschreibung

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden **MÜSSEN**

- `_implicitRules[object]`: Erweiterungen für `implicitRules`

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden **MÜSSEN**

- `_language[object]`: Erweiterungen für Sprache

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden **MÜSSEN**

- `_name[object]`: Erweiterungen für Namen

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und

handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `_status[object]`: Erweiterungen für den Status

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `address[object]`: Die Postanschrift . Model: <https://schema.org/address>

- `addressCountry[string]`: Das Land. Zum Beispiel, Spanien . Model: <https://schema.org/addressCountry>

- `addressLocality[string]`: Die Ortschaft, in der sich die Adresse befindet, und die in der Region liegt . Model: <https://schema.org/addressLocality>

- `addressRegion[string]`: Die Region, in der sich der Ort befindet, und die auf dem Land liegt . Model: <https://schema.org/addressRegion>

- `district[string]`: Ein Bezirk ist eine Art von Verwaltungseinheit, die in einigen Ländern von der lokalen Regierung verwaltet wird.

- `postOfficeBoxNumber[string]`: Die Postfachnummer für Postfachadressen. Zum Beispiel, 03578 . Model: <https://schema.org/postOfficeBoxNumber>

- `postalCode[string]`: Die Postleitzahl. Zum Beispiel, 24004 . Model: <https://schema.org/postalCode>

- `streetAddress[string]`: Die Straßenanschrift . Model: <https://schema.org/streetAddress>

- `alternateName[string]`: Ein alternativer Name für diesen Artikel

- `areaServed[string]`: Das geografische Gebiet, in dem eine Dienstleistung oder ein angebotener Artikel erbracht wird . Model: <https://schema.org/Text>

- `contained[array]`: Diese Ressourcen existieren nicht unabhängig von der Ressource, in der sie enthalten sind - sie können nicht unabhängig identifiziert werden und haben auch keinen eigenen unabhängigen Transaktionsbereich.

- `coverage[array]`: Die Partei(en), die für die Deckung dieses Kontos verantwortlich sind, und in welcher Reihenfolge sie auf das Konto überwiesen werden sollen

- `dataProvider[string]`: Eine Folge von Zeichen zur Identifizierung des Anbieters der harmonisierten Dateneinheit

- `dateCreated[date-time]`: Zeitstempel der Entitätserstellung. Dieser wird normalerweise von der Speicherplattform zugewiesen

- `dateModified[date-time]`: Zeitstempel der letzten Änderung der Entität. Dieser wird in der Regel von der Speicherplattform vergeben

- `description[string]`: Bietet zusätzliche Informationen darüber, was das Konto verfolgt und wie es verwendet wird

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition der Ressource sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `guarantor[array]`: Die für den Ausgleich des Kontos verantwortlichen Parteien, wenn andere Zahlungsmöglichkeiten nicht ausreichen

- `hl7type[object]`: kategorisiert das Konto für Berichts- und Suchzwecke

- `_text[object]`: Erweiterungen für Text

- `coding[array]`: Ein Verweis auf einen von einem Terminologiesystem definierten Code

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `id[string]`: Eindeutige ID für das Element innerhalb einer Ressource (für interne Verweise). Dies kann ein beliebiger String-Wert sein, der keine Leerzeichen enthält

- `id[*]`: Eindeutiger Bezeichner der Entität

- `identifizier[array]`: Eindeutige Kennung, die zur Referenzierung des Kontos verwendet wird.

Kann, muss aber nicht für den menschlichen Gebrauch bestimmt sein (z. B. Kreditkartennummer).

- `implicitRules[string]`: Ein Verweis auf eine Reihe von Regeln, die bei der Erstellung der Ressource befolgt wurden und die bei der Verarbeitung des Inhalts beachtet werden müssen. Häufig handelt es sich um einen Verweis auf einen Implementierungsleitfaden, in dem die speziellen Regeln zusammen mit anderen Profilen usw. definiert sind.

- `language[string]`: Die Basissprache, in der die Ressource geschrieben ist

- `location[*]`: Geojson-Referenz auf das Element. Es kann Punkt, LineString, Polygon, MultiPoint, MultiLineString oder MultiPolygon sein

- `meta[object]`: Die Metadaten über die Ressource. Dies sind Inhalte, die von der Infrastruktur gepflegt werden. Änderungen am Inhalt sind nicht immer mit Versionsänderungen an der Ressource verbunden

- `_lastUpdated[object]`: Erweiterungen für lastUpdated

- `_source[object]`: Erweiterungen für die Quelle

- `_versionId[object]`: Erweiterungen für versionId

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `id[string]`: Eindeutige ID für das Element innerhalb einer Ressource (für interne Verweise). Dies kann ein beliebiger String-Wert sein, der keine Leerzeichen enthält

- `lastUpdated[string]`: Wann die Ressource zuletzt geändert wurde - z. B. als die Version geändert wurde

- `profile[array]`: Eine Liste von Profilen (Verweise auf [[[StructureDefinition]]]-Ressourcen), mit denen diese Ressource übereinstimmen soll. Die URL ist ein Verweis auf [[[StructureDefinition.url]]]

- `security[array]`: Sicherheitskennzeichnungen, die auf diese Ressource angewendet werden. Diese Kennzeichnungen verbinden bestimmte Ressourcen mit der allgemeinen Sicherheitsrichtlinie und -infrastruktur

- `source[string]`: Eine Uri, die das Quellsystem der Ressource identifiziert. Dies liefert eine minimale Menge an [[[Provenance]]]-Informationen, die verwendet werden können, um die Quelle der Informationen in der Ressource zu verfolgen oder zu unterscheiden. Die Quelle kann ein anderer FHIR-Server, ein Dokument, eine Nachricht, eine Datenbank usw. sein.

- `tag[array]`: Tags, die auf diese Ressource angewendet werden. Tags sind dazu gedacht, Ressourcen zu identifizieren und mit Prozessen und Arbeitsabläufen in Verbindung zu bringen, und Anwendungen sind nicht verpflichtet, die Tags bei der Interpretation der Bedeutung einer Ressource zu berücksichtigen

- `modifierExtension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition der Ressource sind und die das Verständnis des Elements, das sie enthält, und/oder das Verständnis der Nachkommen der enthaltenen Elemente verändern. In der Regel bieten Modifier-Elemente eine Negation oder Qualifikation. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren darf, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN. Anwendungen, die eine Ressource verarbeiten, müssen auf Modifier-Erweiterungen prüfen.

Modifier-Erweiterungen MÜSSEN die Bedeutung der Elemente von Resource oder DomainResource NICHT ändern (auch nicht die Bedeutung von modifierExtension selbst)

- `name[string]`: Name, der für das Konto verwendet wird, wenn es in Berichten usw. angezeigt wird

- `owner[object]`: Gibt den Dienstleistungsbereich, das Krankenhaus, die Abteilung usw. an, der/die für die Verwaltung des Kontos zuständig ist.

- `_display[object]`: Erweiterungen für die Anzeige

- `_reference[object]`: Erweiterungen als Referenz

- `_type[object]`: Erweiterungen für Typ

- `display[string]`: Klartextbeschreibung, die die Ressource zusätzlich zur Ressourcenreferenz identifiziert

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `id[string]`: Eindeutige ID für das Element innerhalb einer Ressource (für interne Verweise). Dies kann ein beliebiger String-Wert sein, der keine Leerzeichen enthält

- `identifier[object]`: Ein Identifikator für die Zielressource. Dieser wird verwendet, wenn es keine Möglichkeit gibt, die andere Ressource direkt zu referenzieren, entweder weil die Entität, die er repräsentiert, nicht über einen FHIR-Server verfügbar ist, oder weil es für den Autor der Ressource keine Möglichkeit gibt, einen bekannten Identifikator in einen tatsächlichen Ort umzuwandeln. Es ist nicht erforderlich, dass ein `Reference.identifier` auf etwas verweist, das tatsächlich als FHIR-Instanz verfügbar ist, aber er MUSS auf ein Geschäftskonzept verweisen, von dem erwartet wird, dass es als FHIR-Instanz verfügbar ist, und diese Instanz muss zu einem FHIR-Ressourcentyp gehören, der von der Referenz erlaubt wird.

- `reference[string]`: Ein Verweis auf einen Ort, an dem die andere Ressource zu finden ist. Bei dem Verweis kann es sich um einen relativen Verweis handeln, der sich auf die Basis-URL des Dienstes bezieht, oder um eine absolute URL, die zu dem Ort führt, an dem die Ressource gefunden wird. Der Verweis kann versionsspezifisch sein oder nicht. Wenn die Referenz nicht auf einen FHIR RESTful Server verweist, sollte davon ausgegangen werden, dass sie versionsspezifisch ist. Interne Fragment-Referenzen (beginnen mit '#') verweisen auf enthaltene Ressourcen

- `partOf[object]`: Verweis auf ein übergeordnetes Konto

- `_display[object]`: Erweiterungen für die Anzeige

- `_reference[object]`: Erweiterungen als Referenz

- `_type[object]`: Erweiterungen für Typ

- `display[string]`: Klartextbeschreibung, die die Ressource zusätzlich zur Ressourcenreferenz identifiziert

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `id[string]`: Eindeutige ID für das Element innerhalb einer Ressource (für interne Verweise). Dies kann ein beliebiger String-Wert sein, der keine Leerzeichen enthält

- `identifier[object]`: Ein Identifikator für die Zielressource. Dieser wird verwendet, wenn es keine Möglichkeit gibt, die andere Ressource direkt zu referenzieren, entweder weil die Entität, die er repräsentiert, nicht über einen FHIR-Server verfügbar ist, oder weil es für den Autor der Ressource keine Möglichkeit gibt, einen bekannten Identifikator in einen tatsächlichen Ort umzuwandeln. Es ist nicht erforderlich, dass ein `Reference.identifier` auf etwas verweist, das tatsächlich als FHIR-Instanz verfügbar ist, aber er MUSS auf ein Geschäftskonzept verweisen, von dem erwartet wird, dass es als FHIR-Instanz verfügbar ist, und diese Instanz muss zu einem FHIR-Ressourcentyp gehören, der von der Referenz erlaubt wird.

- `reference[string]`: Ein Verweis auf einen Ort, an dem die andere Ressource zu finden ist. Bei dem Verweis kann es sich um einen relativen Verweis handeln, der sich auf die Basis-URL des Dienstes bezieht, oder um eine absolute URL, die zu dem Ort führt, an dem die Ressource gefunden wird. Der Verweis kann versionsspezifisch sein oder nicht. Wenn die Referenz nicht auf einen FHIR RESTful Server verweist, sollte davon ausgegangen werden, dass sie versionsspezifisch ist. Interne Fragment-Referenzen (beginnen mit '#') verweisen auf enthaltene Ressourcen

- `resourceType[string]`: Dies ist eine Kontoressource

- `seeAlso[*]`: Liste von URLs, die auf zusätzliche Ressourcen zu dem Artikel verweisen

- `servicePeriod[object]`: Der Datumsbereich der mit diesem Konto verbundenen Dienstleistungen

- `_end[object]`: Erweiterungen für Ende

- `_start[object]`: Erweiterungen für den Start

- `end[string]`: Das Ende des Zeitraums. Wenn das Ende des Zeitraums fehlt, bedeutet dies, dass zum Zeitpunkt der Erstellung der Instanz kein Ende bekannt oder geplant war. Der Beginn kann in der Vergangenheit und das Enddatum in der Zukunft liegen, was bedeutet, dass das Ende der Periode zu diesem Zeitpunkt erwartet/geplant ist

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `id[string]`: Eindeutige ID für das Element innerhalb einer Ressource (für interne Verweise). Dies kann ein beliebiger String-Wert sein, der keine Leerzeichen enthält

- `source[string]`: Eine Folge von Zeichen, die die ursprüngliche Quelle der Entitätsdaten als URL angibt. Empfohlen wird der voll qualifizierte Domänenname des Quellenbieters oder die URL des Quellobjekts.

- `status[string]`: Zeigt an, ob das Konto derzeit benutzt/verwendbar ist oder nicht

- `subject[array]`: Identifiziert die Einrichtung, die die Ausgaben tätigt. Auch wenn die unmittelbaren Empfänger der Dienstleistungen oder Waren mit dem Kontoinhaber verbundene

Unternehmen sein können, wurden die Ausgaben letztendlich von dem Kontoinhaber getätigt.

- `text[object]`: Ein für den Menschen lesbarer Text, der eine Zusammenfassung der Ressource enthält und verwendet werden kann, um den Inhalt der Ressource für einen Menschen darzustellen. Der Text muss nicht alle strukturierten Daten kodieren, aber er muss so detailliert sein, dass es für einen Menschen klinisch sicher ist, den Text nur zu lesen. In den Ressourcendefinitionen kann festgelegt werden, welche Inhalte im Narrativ dargestellt werden sollten, um die klinische Sicherheit zu gewährleisten.

- `_status[object]`: Erweiterungen für den Status

- `div[*]`: Der eigentliche erzählerische Inhalt, eine abgespeckte Version von XHTML

- `extension[array]`: Kann verwendet werden, um zusätzliche Informationen darzustellen, die nicht Teil der Basisdefinition des Elements sind. Um die Verwendung von Erweiterungen sicher und handhabbar zu machen, gelten strenge Regeln für die Definition und Verwendung von Erweiterungen. Obwohl jeder Implementierer eine Erweiterung definieren kann, gibt es eine Reihe von Anforderungen, die als Teil der Definition der Erweiterung erfüllt werden MÜSSEN

- `id[string]`: Eindeutige ID für das Element innerhalb einer Ressource (für interne Verweise). Dies kann ein beliebiger String-Wert sein, der keine Leerzeichen enthält

Erforderliche Eigenschaften

- `id`

- `type`

Das Datenmodell wurde von der ursprünglichen Version 4.3 des HL7-Standards übernommen. Das ursprüngliche Attribut `-type-` wurde in `-hl7type-` umbenannt, da es einen Konflikt mit dem obligatorischen Typ in NGS1 gab. Außerdem wurden weitere kleinere Anpassungen vorgenommen. Siehe <https://github.com/smart-data-models/dataModel.HL7/blob/master/README.md> unter dem Thema `root`

There is no requirement that a Reference.identifier point to something that is actually exposed as a FHIR instance, but it SHALL point to a business concept that would be expected to be exposed as a FHIR instance, and that instance would need to be of a FHIR resource type allowed by the reference'

```
    type: string
  reference:
    description: "A reference to a location at which the other
resource is found. The reference may be a relative reference, in which case it is
relative to the service base URL, or an absolute URL that resolves to the location
where the resource is found. The reference may be version specific or not. If the
reference is not to a FHIR RESTful server, then it should be assumed to be version
specific. Internal fragment references (start with '#') refer to contained
resources"
    type: string
  type:
    description: |-
      The expected type of the target of the reference. If both
Reference.type and Reference.reference are populated and Reference.reference is a
FHIR URL, both SHALL be consistent.
      The type is the Canonical URL of Resource Definition that is
the type this reference refers to. References are URLs that are relative to http://
hl7.org/fhir/StructureDefinition/ e.g. Patient is a reference to http://hl7.org/
fhir/StructureDefinition/Patient. Absolute URLs are only allowed for logical models
(and can only be used in references in logical models, not resources)

        description: 'An identifier for the target resource. This is
used when there is no way to reference the other resource directly, either because
the entity it represents is not available through a FHIR server, or because there
is no way for the author of the resource to convert a known identifier to an
actual location. There is no requirement that a Reference.identifier point to
something that is actually exposed as a FHIR instance, but it SHALL point to a
business concept that would be expected to be exposed as a FHIR instance, and that
instance would need to be of a FHIR resource type allowed by the reference'
        type: string
      reference:
        description: "A reference to a location at which the other
resource is found. The reference may be a relative reference, in which case it is
relative to the service base URL, or an absolute URL that resolves to the location
where the resource is found. The reference may be version specific or not. If the
reference is not to a FHIR RESTful server, then it should be assumed to be version
specific. Internal fragment references (start with '#') refer to contained
resources"
        type: string
      type:
        description: |-
          The expected type of the target of the reference. If both
          Reference.type and Reference.reference are populated and Reference.reference is a
          FHIR URL, both SHALL be consistent.
          The type is the Canonical URL of Resource Definition that is
          the type this reference refers to. References are URLs that are relative to http://
          hl7.org/fhir/StructureDefinition/ e.g. Patient is a reference to http://hl7.org/
          fhir/StructureDefinition/Patient. Absolute URLs are only allowed for logical models
          (and can only be used in references in logical models, not resources)

            type: string
        identifier:
            description: 'An identifier for the target resource. This is
used when there is no way to reference the other resource directly, either because

```

the entity it represents is not available through a FHIR server, or because there is no way for the author of the resource to convert a known identifier to an actual location. There is no requirement that a Reference.identifier point to something that is actually exposed as a FHIR instance, but it SHALL point to a business concept that would be expected to be exposed as a FHIR instance, and that instance would need to be of a FHIR resource type allowed by the reference'

```
    type: string
  reference:
    description: "A reference to a location at which the other
resource is found. The reference may be a relative reference, in which case it is
relative to the service base URL, or an absolute URL that resolves to the location
where the resource is found. The reference may be version specific or not. If the
reference is not to a FHIR RESTful server, then it should be assumed to be version
specific. Internal fragment references (start with '#') refer to contained
resources"
```

```
    type: string
  type:
    description: |-
      The expected type of the target of the reference. If both
Reference.type and Reference.reference are populated and Reference.reference is a
FHIR URL, both SHALL be consistent.
```

The type is the Canonical URL of Resource Definition that is the type this reference refers to. References are URLs that are relative to <http://hl7.org/fhir/StructureDefinition/> e.g. Patient is a reference to <http://hl7.org/fhir/StructureDefinition/Patient>. Absolute URLs are only allowed for logical models (and can only be used in references in logical models, not resources)

Konto NGSI-v2 Schlüsselwerte Beispiel

Hier ist ein Beispiel für einen Account im JSON-LD-Format als Key-Values. Dies ist mit NGSI-v2 kompatibel, wenn `options=keyValues` verwendet wird und liefert die Kontextdaten einer einzelnen Entität.

show/hide example

```

{
  "resourceType": "Account",
  "id": "example",
  "type": "Account",
  "text": {
    "status": "generated",
    "div": "\u003cdiv xmlns\u003d'http://www.w3.org/1999/xhtml'\u003eHACC Funded Billing for
Peter James Chalmers\u003c/div\u003e"
  },
  "identifier": [
    {
      "system": "urn:oid:0.1.2.3.4.5.6.7",
      "value": "654321"
    }
  ],
  "status": "active",
  "hl7type": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-ActCode",
        "code": "PBILLACCT",
        "display": "patient billing account"
      }
    ]
  },
  "text": "patient"
},
"name": "HACC Funded Billing for Peter James Chalmers",
"subject": [
  {

```

```

    "reference": "Patient/example",
    "display": "Peter James Chalmers"
  },
